

Renewable Energy Workshop Series

For Homeowners, Business, and Government

November 30

Understanding the Grid

Gary Radloff, WI Energy Institute

6:30—8:00 pm

Northern Great Lakes Visitor Center

December 4

Heating with Wood

Scott Sanford, UW-Extension

6:30—8:00 pm

WITC Conference Center

January 4

Solar For Homeowners

Chris LaForge

6:30—8:00 pm

Northern Great Lakes Visitor Center

January 18

Solar For Business and Government

Sherrie Gruder, UW-Extension

6:30—8:00 pm

Northern Great Lakes Visitor Center

January 10

**Solar for Homeowners—
Personalized Planning Session**

\$20 - Registration Required!

6:00—8:00 pm

Northern Great Lakes Visitor Center

January 25

**Solar for Businesses and Government—
Personalized Planning Session**

\$20 - Registration Required!

6:00—8:00 pm

Northern Great Lakes Visitor Center

February 8

Community Solar

Bill Bailey, CheqBay Renewables

6:30—8:00 pm

Northern Great Lakes Visitor Center

March 1

Geothermal

6:30—8:00 pm

Northern Great Lakes Visitor Center

Renewable Energy Workshop Series

For Homeowners, Business, and Government

November 30—Understanding the Grid, Gary Radloff, UW Energy Institute

The recently proposed new transmission line in Bayfield County has generated considerable interest in “the grid” and how we generate and transport electricity. In this session Gary Radloff will provide an overview of the grid and discuss the policies and politics surrounding upgrading, expanding, and tailoring the grid to distributed energy generation.

December 4—Heating with Wood, Scott Sanford, UW-Madison

We live in a sea of trees making wood a great option for heating....if it’s done right. With new technologies heating with wood has become increasingly efficient and cost-effective. Scott Sanford will present these new technologies and provide information on how to heat with wood safely and efficiently...without smoking out your neighbors.

January—Solar Sessions

Generating electricity with solar panels has become an increasingly cost-effective way to generate electricity and reduce electric bills. On **January 4**, Chris LaForge will provide the latest and greatest information on solar for homeowners. Then, on **January 10**, homeowners can sign-up for a planning session to figure out if solar is a viable option their individual homes. We’ll help you figure initial costs and a payback period. On **January 18**, Sherrie Gruder will provide the latest solar information for businesses and government. Then, on **January 24**, we’ll provide one-on-one assistance to help you determine feasibility for your business or government entity. The January 4 and 18 sessions are free and open to the public. There is a \$20 registration fee per household or business for the January 10 and 24 sessions.

February 8— Community Solar, Bill Bailey, CheqBay Renewables

Using the sun to generate electricity is all about scale. The larger the scale the cheaper it gets. Bill Bailey and CheqBay Renewables have been working on a number of community solar projects. This session will provide the latest updates and provide information on how you can get involved.

March 1— Geothermal

Using the latent heat in the ground is a simple way to reduce heating and cooling costs. Our speaker will provide the latest information on this technology and help you determine if geothermal is an option for your home, business, or government building.
